

TRP Week 7 - Data Contract Enforcer (Automatically generated report)

Data Health Score: 50 0 100

This run aggregated 35 contract checks across the selected Week 3 and Week 5 reports (100 0% PASS on those two)
Data health score is 50 0 100 using severity-weighted deductions over all structured validation JSON in validation reports (3...

Violations (top 3):

- CRITICAL: Week 3 Document Refinery: extracted facts confidence must stay a float in 0 0-1 0 Downstream systems that interpret confidence as a probability (Week 4 lineage attribution and any scoring consumers) may mis-rank or mis-blame ...
- CRITICAL: Each criterion score must be integer 1-5
- HIGH: Statistical drift vs first-run baseline

Schema changes detected:

- week3-document-refinery-extractions: compatibility verdict=BREAKING
- week3-document-refinery-extractions: breaking field extracted facts
- week3-document-refinery-extractions: migration task - Update downstream consumer mappings for extracted facts to match the new contract field type requiredness
- week3-document-refinery-extractions: rollback - Pin producer to the previous schema snapshot and roll back consumer deployments until migrations are complete

AI system risk assessment:

- Embedding drift is within acceptable bounds
- Structured LLM output schema violation rate is rising (violation rate=0 12, baseline=0 0)

Recommended actions:

1 Update C:\Users\SAMILA\Documents\Projects\Personal\tenx\Week 7\Week 7 (Data Contract Enforcer)\src\week3\extractor.py so extracted facts confidence is a float in 0 0-1 0 (contract week3-document-refinery-extractions, clause week3 extra...

3 Stabilize Week 2 structured verdict outputs (scores as integers 1-5); see contracts ai extensions.py and outputs week2 verdicts.jsonl
